

Set up cPanel email accounts

Article Number: 944 | Rating: Unrated | Last Updated: Wed, Sep 9, 2020 at 8:11 PM

cPanel lets you create email addresses at the domains on your Linux Hosting account. Log in to cPanel. In the "Email" section, click "Accounts" Click "Create Account". Complete the on-screen fields, and then click "Create Account". **Having trouble?** If you have trouble adding a cPanel email account to Outlook.com email, check out "Outlook.com Postmaster" for assistance. If your cPanel email accounts aren't working, you probably need to update your domain name's email settings (technically known as its DNS zone file's MX Records).
