

Log in to my Server with Plesk

Article Number: 951 | Rating: Unrated | Last Updated: Wed, Sep 9, 2020 at 8:06 PM

You can log directly into Plesk using the username and password for your server. This is a secure way to give others access to the server without giving them your account password. You *don't* have to have admin access enabled to log in this way. **Note:** Plesk on Windows is not supported for Dedicated Servers. Open a web browser with this URL: **https://[your server IP address]:8443**. Enter **admin** as your Username Enter your **hosting account** Password and then click **Log in**. **Related steps** [Connect to my server with SSH \(Secure Shell\)](#)
