

Create an account in WebHost Manager (WHM)

Article Number: 984 | Rating: Unrated | Last Updated: Wed, Sep 2, 2020 at 8:39 PM

If you want to host a domain name's website on your server using cPanel®, you have to create an Account in WebHost Manager (WHM). Log in to WebHost Manager (WHM) using "root" for your username and your server's password at "https://yourserverip:2087", where "yourserverip" is your server's IP address. From the home screen, click "Create a New Account". Complete the on-screen fields in the "Domain Information" section.

Note: WHM automatically creates a Username for you based on the first eight characters of your domain name.

(Optional) Complete the other on-screen fields. Click "Create". **WHM displays a results page outlining your new Account. If there are no problems, you'll see "Account Creation Complete" at the bottom of the page.**
