

Enable addon domains in a cPanel account on my server

Article Number: 987 | Rating: Unrated | Last Updated: Wed, Sep 2, 2020 at 9:04 PM

When you use the default settings to add a cPanel account to your Dedicated Server through WHM, you can't add addon domains. It's easy to change this setting so you can use as many addon domains as you like. Log in to your account. ([Need help logging in?](#)) Under **Manage Products** select **Manage Dedicated Servers**, select the Dedicated Server you wish to use, and select **Manage**. Click **Launch WHM**. In the main WHM page, select **Account Functions** > **Modify an Account**, and then select the account from the list and click **Modify**. Or, if you have only one account, continue with the next step. In the **Resource Limits** section, next to **Addon Domains**, enter a number to set the amount of addon domains for this account, or select *Unlimited*. At the bottom of the **Modify an Account** page, click **Save**.
