

Add FTP users to my server with cPanel and WHM

Article Number: 990 | Rating: 1/5 from 4 votes | Last Updated: Wed, Sep 2, 2020 at 9:21 PM

Here's how to give other people FTP access to your Dedicated Server so they can upload files or manage your site. You can limit what these users can have access to, and how much they can upload.

Required: Before you can add FTP users to your server with cPanel and Web Host Manager (WHM), you need to set up a cPanel account in WHM. Log in to your account. ([Need help logging in?](#)) Under **Manage Products** select **Manage Dedicated Servers**, select the Dedicated Server you wish to use, and select **Manage**. Make sure the domain name you want to use is selected under **Accounts** and then click **Launch cPanel**. In the **Files** section of cPanel, click **FTP Accounts**. In the **Add FTP Account** section, complete these fields:

Log In

The first part of your username. The full username includes @[your account's primary domain name]. So if your primary domain is coolexample.com, and you enter ftpuser, then the full FTP username is ftpuser@coolexample.com.

Password

The password for this FTP user.

Directory

The directory this user can access. If you want to give the user access to the entire account, enter nothing but a forward slash (/).

Quota

The amount of space (in MB) the user can upload to that directory. If you don't want to limit this FTP user, select **Unlimited**.

Since FTP quota limits are set by directory, assigning a user to an existing directory counts existing files as part of the quota.

Click **Create FTP Account**. FTP users are available as soon as you create them. Repeat these steps for any other users you want to add.
